Career Objective

To pursue a challenging career in Software Development and be a part of a progressive organization that gives a scope to enhance my skills, knowledge & reach pinnacle in this growing & exciting industry with sheer determination, dedication & hard work.

Technical skills

- Technical Skills: Node.js, angular2Js, Java and Java script.
- Web Standards: Html, CSS, JavaScript.
- Scripting Languages: VB Script, Selenium
- Databases: MongoDB Lab (Basic)
- Development Tools: Sublime text, IntelliJ IDEA, Visual Studio Code
- Operating System: Windows Family and Ubuntu

Hobby Projects

Chatroom Application-

- In this chatroom, initially page request for Authentication by asking user name and lets the user to enter chatroom and also indicate the all the active users in chatroom.
- It allows to communicate with users in Real Time and when users leave the chatroom it indicates all users that particular user has left the chatroom and update the chat array.
- Using Node.js to create server and Express.js to route along with jQuery to style and html scripting language like JavaScript along with Socket.IO to emit the user response and keep the connection till user leaves
- GitHub link: github.com/bharath857/Chatroom

SIMPLE API –

- This application includes 4 users with description like job, job title, status and unique ID assigned by mongo lab
- This API allows to add the user, delete the user, and find the user by name and ID, to create or add the user is best experienced by postman
- Node.js is used to create server and Express.js to route to all users and MongoDB Lab is used to store initial configuration Setup.
